Performance Pan Feeding System

A revolutionary new feeding system for all types of poultry

The LA Systems Performance Feeding System is a revolutionary new feeding pan for use with all types of poultry. The pan is unique in that it has no grill. Grills on feeding pans restrict free access to the food, can trap birds inside, and can damage the birds head as it withdraws. The absence of a grill also makes the pan easy to clean - there are fewer dirt traps with the Performance pan than any other. The high lip on the pan ensures that there is minimal food wastage - this is why most of our customers report an improved food conversion with the Performance pan.

Broiler Pan

Plastic end hoppers are part of the system, they are smooth sided and lighter than old fashioned steel hoppers. This makes them easier to clean and re-assemble. Each individual hopper has a weight sensor to trigger the main cross auger - this ensures that no pan line will be without food even if the last line is not calling for it. We also use individual electric winches for the feeder lines.

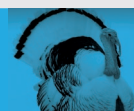

The Performance pan design has been adapted for use with broiler breeders on separate ration and for turkeys. The turkey feeder is deeper than the broiler pan with an extended neck to allow the birds free movement under the system. The pan has a detachable extension ring that is fitted at approximately 55 days. The pan can then be used for the biggest turkey stags. The system is extremely strong and durable and has recently been fitted to replace the most established turkey feed pans.
