Drinker Systems

LA SYSTEMS

Aqua-2 Drinker Systems

The poultry drinker system is available for all types of poultry production. The broiler nipple with cup system has been proven to improve litter quality and bird weights.

Suspension brackets have been designed to attach Aqua-2 delivery pipe, with nipples and cups fitted, to nearly every other suspension rail available to give the farmer the latest equipment at minimum cost. "J-lock" versions of the nipple are also

available to replace existing nipples.

The system is easy to manage, with the easily adjustable pressure regulator maintaining optimum water pressure and accurate individual winches ensuring the correct height.

The nipples are available in stainless steel and plastic bodied - performance and longevity are equally as impressive with both. Our delivery pipes are connected using rubber

Plastic and Stainless Steel bodies with internal Stainless Steel mechanisms

4024 High Flow

Suitable for all ages*

joiners with metal clips - no glue is used. In line pre-set regulators can be installed where the floor has a slope. It is also possible to use electric winches.

For laying birds LA Systems supplies drinkers with perch rail or the anti-perch "spinner". Both are made from high quality aluminium. The perch rail is popular for free range and barn egg production and allows the

birds to perch naturally on the drinker system. Heavy duty beam winches are used with galvanised steel drop wires to allow for the extra weight.

The new turkey drinker is now available from LA Systems. Based on the familiar broiler drinker it has a larger water delivery pipe, larger suspension rail and is the first nipple based drinker tough enough to withstand the punishment received from even the largest turkey stags. In addition to being strong, the system also supplies fresh clean water in sufficient quantity to improve weights and keep litter dry. This turkey drinker is now the system of choice for the worlds most efficient turkey growers.
